After a heated election campaign, Joe Biden has defeated Donald Trump to become the President of the United States. The appointment shows that the US will continue to play a significant role in the global stage.

The West is situated in the Amazon. These societies can inform the West, argues, about what it means to the 'discovery' of the Americas by the Old World. The aftermath of this catastrophic event called the 'Ends of the World'. Could this lead to the concept of the collapse of the world as we know it?

In times of global warming, the end of the world seems to finally be upon us. But is this really the case? Or is it a matter of perspective? What if everything will wither away at some point anyway? Is there a need to act now? What if the emergency is already happening? And how does academia deal with this topic? Ranging from the nihilistic (what does it matter if everything will wither away at some point anyway) to the hopeful, with a predominant optimism that trust in science prevails. However, a recurring question about climate change and is interested in fact-based answers. Our mission is to inform the public about the urgency of the situation to citizens and governments.

University Rebellion is a group of students, staff and academics who see universities are in the perfect position to accelerate the transition towards sustainability, but are not yet taking their responsibility.
